

M2 Antenna Systems, Inc.

Model No: VHF-50

FEATURES:

A VHF-50 kit contains two complete cables. Our phasing cables typically use Times LMR-400 closed cell foam coax. We electronically phase match the cables at our factory to ensure peak performance from your antenna system. System loss is reduced over RG-213 by using LMR-400 coax and silver-plated connectors. Connectors are crimped and sealed to the coax with sealing shrink tube. Times Microwave LMR-400 coax weighs less than half other coax types placing less stress on your antenna and tower system. NOTE: Most antenna systems also require a POWER DIVIDER.

LMR-400 special features:

- Lowest loss RG-8 type cable on the market.
- An extremely tough, smooth, exterior jacket that shrugs off weather and resists physical abuse.
- Closed cell foam insulation with bonded Mylar jacket - no water intrusion.
- Uses copper plated aluminum center conductor for a major weigh reduction.
- LMR-400 weighs only 7 lb / 100 ft.
